MVP – Data
Platform

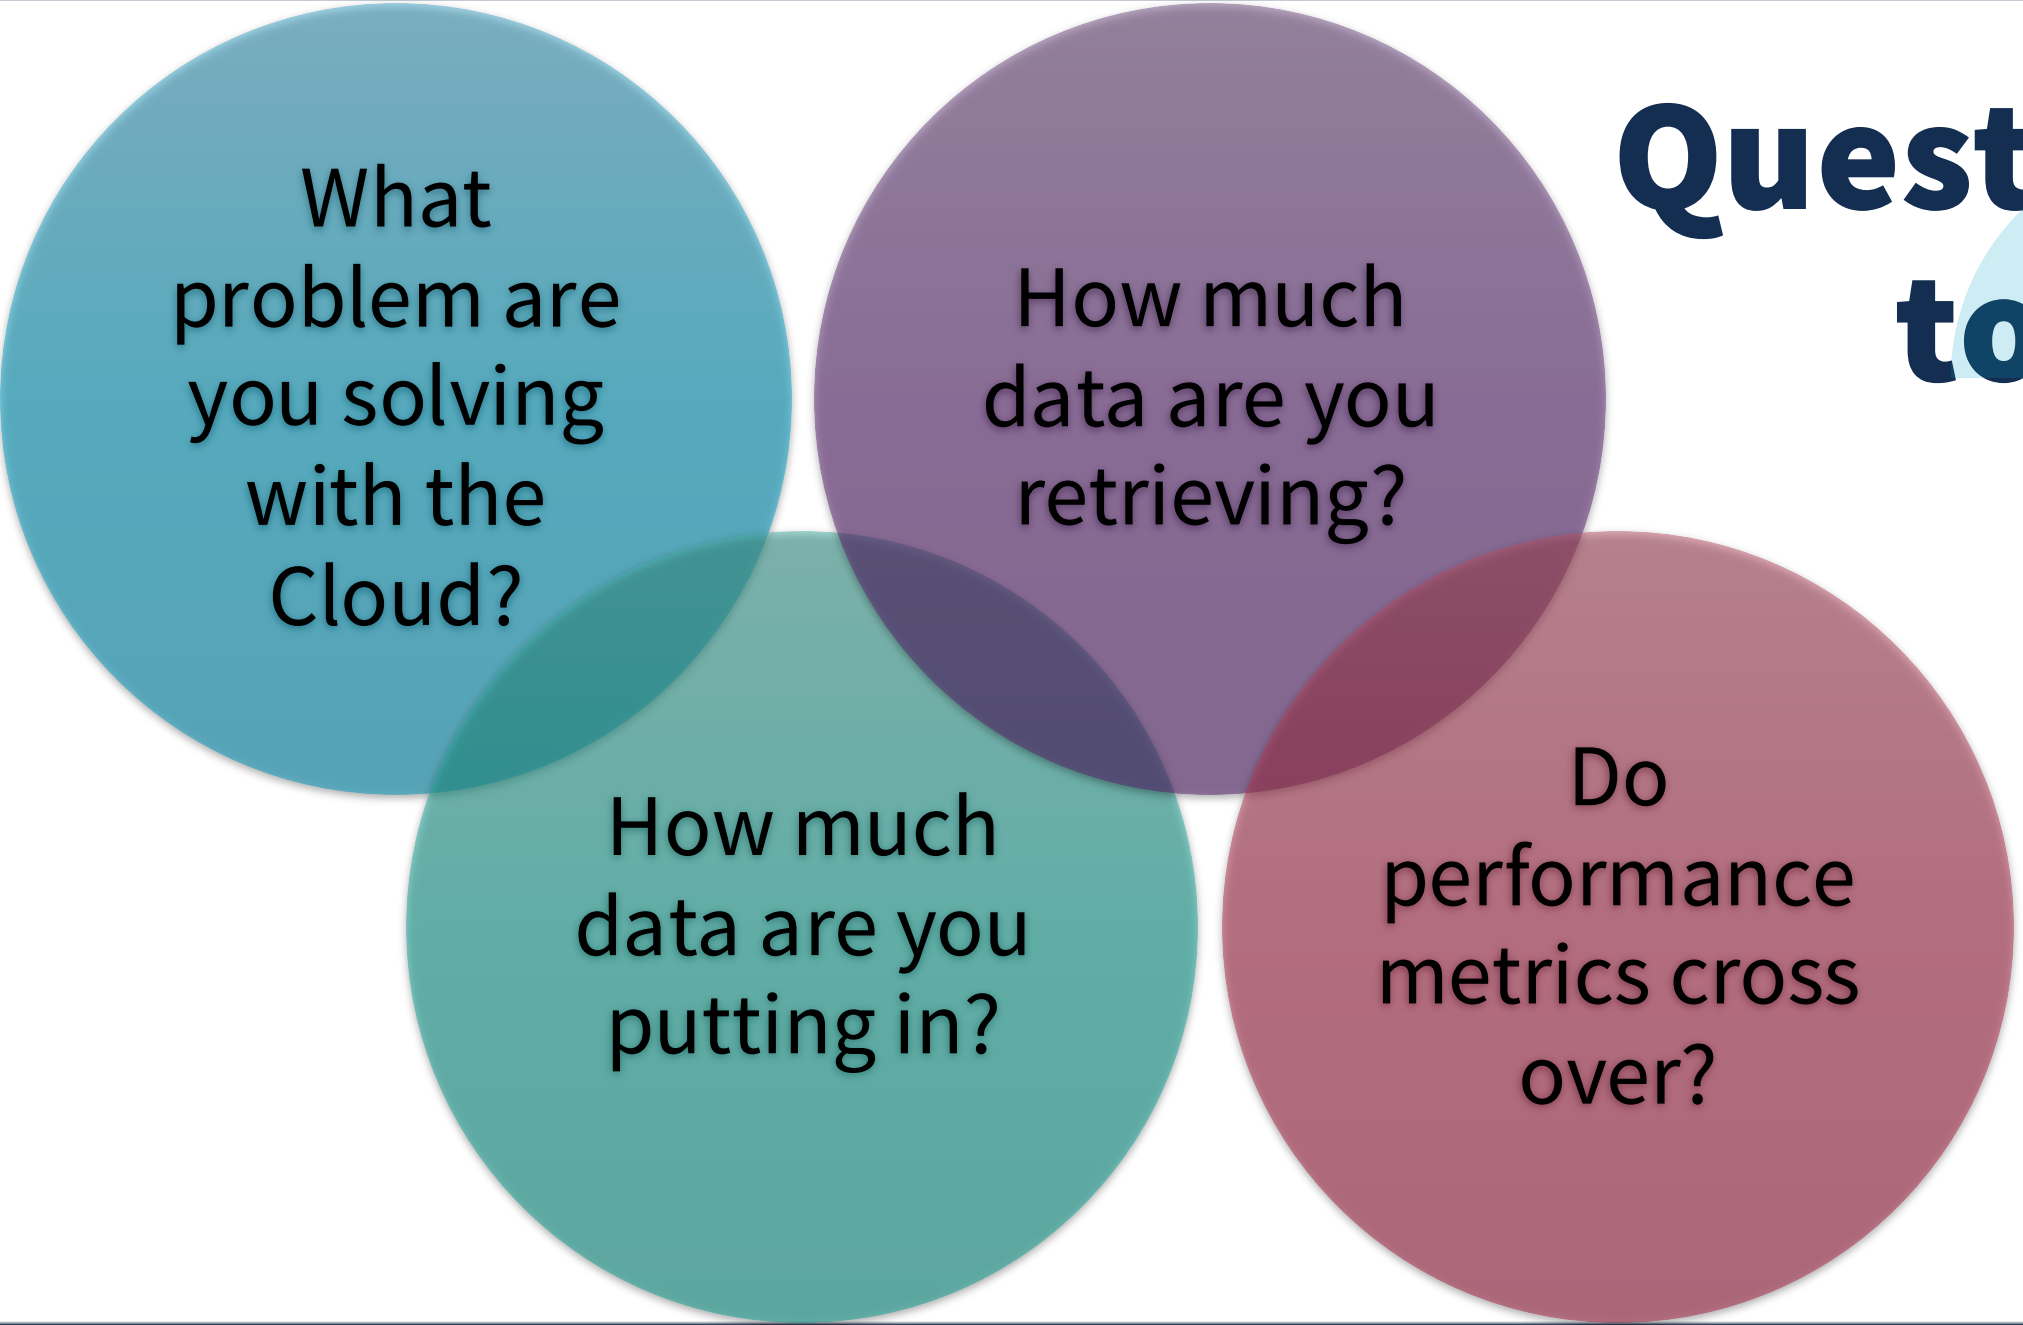

Friend of Redgate

Disclaimer

**Your on-premises
performance is not
the same as the
Cloud**

Questions to Ask

What
problem are
you solving
with the
Cloud?

How much
data are you
retrieving?

How much
data are you
putting in?

Do
performance
metrics cross
over?

Performance Control

**Control
Granularity**

Architecture

Azure SQL

Infrastructure-as-a-Service

Platform-as-a-Service

SQL Server on Azure Virtual
Machines

Best for lift and shift of
workloads requiring 100% SQL
Server compatibility and OS-
level access

Azure SQL Managed
Instance

Best for modernizing existing
apps

Azure SQL
Database

Best for modern cloud
applications

Azure Virtual Machines

Azure VM Variations

**Processing
Power**

Memory

**Storage
Capacity**

Determine the Size of the VM

| Option | Description |
|--------------------------|--|
| General purpose | Balanced CPU-to-memory ratio. Ideal for testing and development, small to medium databases, and low to medium traffic web servers. |
| Compute optimized | High CPU-to-memory ratio. Suitable for medium traffic web servers, network appliances, batch processes, and application servers. |
| Memory optimized | High memory-to-CPU ratio. Great for relational database servers, medium to large caches, and in-memory analytics. |
| Storage optimized | High disk throughput and IO. Ideal for VMs running databases. |
| GPU | Heavy graphics rendering and video editing. These VMs are ideal options for model training and inferencing with deep learning. |
| High performance compute | The fastest and most powerful CPU with optional high-throughput network interfaces. |

Managed Disks

Like the disks in your data center, only virtualized

Block level storage volumes

Different performance characteristics

Striping disks on VMs for increased IOPS/throughput

Managed Disk Performance Aspects

| | Ultra Disk | Premium SSD v2 | Premium SSD | Standard SSD | Standard HDD |
|----------------|-------------|----------------|-------------|--------------|---------------|
| Disk type | SSD | SSD | SSD | SSD | HDD |
| Max throughput | 10,000 MB/s | 1,200 MB/s | 900 MB/s | 750 MB/s | 500 MB/s |
| Max IOPS | 400,000 | 80,000 | 20,000 | 6,000 | 2,000, 3,000* |
| COSTS | | | | | |

Performance Characteristics

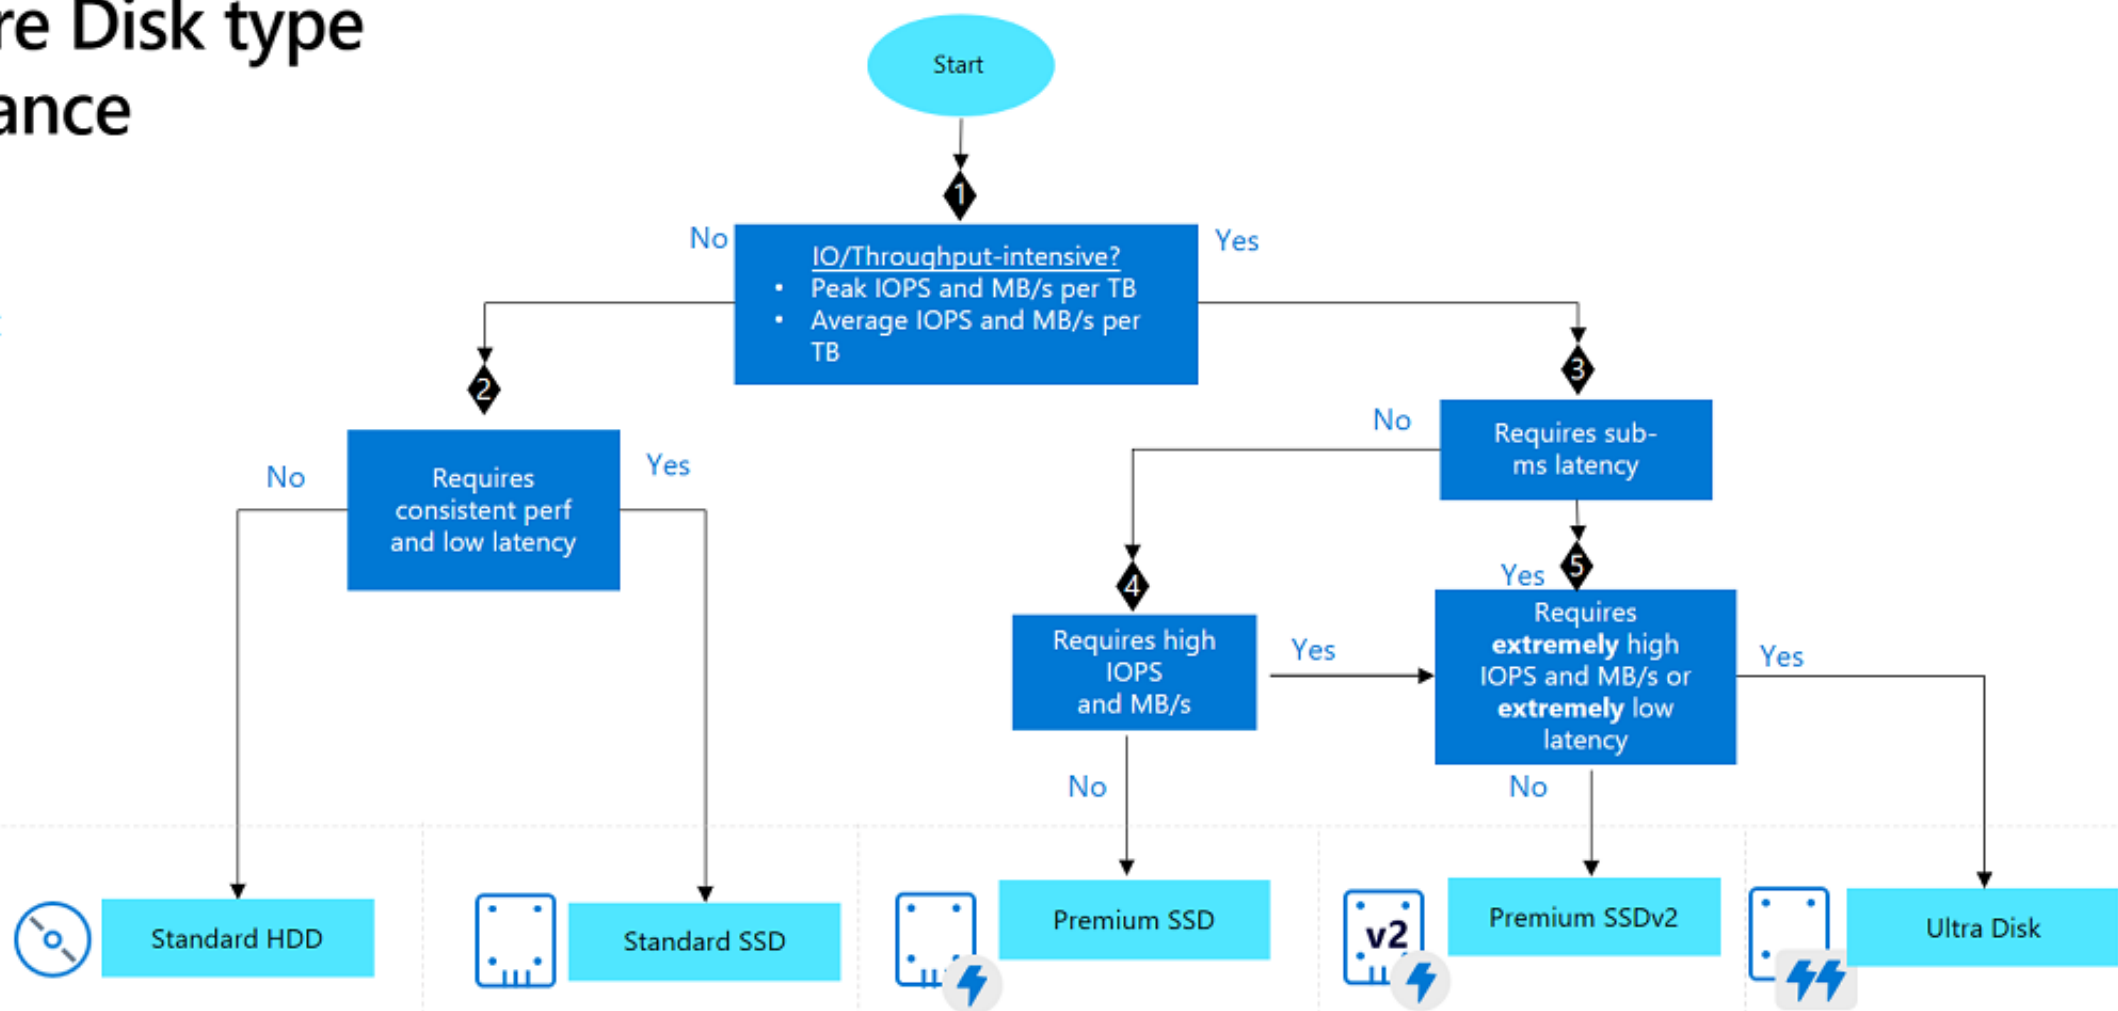

| Size | Capacity | IOPS | Throughput |
|------|----------|-------|---------------|
| P1 | 4 GiB | 120 | 25 MB/second |
| P2 | 8 GiB | 120 | 25 MB/second |
| P3 | 16 GiB | 120 | 25 MB/second |
| P4 | 32 GiB | 120 | 25 MB/second |
| P6 | 64 GiB | 240 | 50 MB/second |
| P10 | 128 GiB | 500 | 100 MB/second |
| P15 | 256 GiB | 1,100 | 125 MB/second |
| P20 | 512 GiB | 2,300 | 150 MB/second |
| P30 | 1 TiB | 5,000 | 200 MB/second |

Choose Azure Disk type for performance

Primary Considerations:

- Latency
- IOPS
- Throughput

Disk Types

Disk Characteristics

| | | | | |
|------------------------------------|---|--|---------------------------------|----------------------------------|
| Most cost-efficient storage on HDD | Entry level SSD with lowest GiB cost on Cloud | Great balance for cost and performance | Best price performance on Azure | Highest performing disk offering |
|------------------------------------|---|--|---------------------------------|----------------------------------|

Disk Sizes

Per IOPS, capacity & throughput requirements.

Performance (NVMe)

Enable capabilities to enhance the performance of your resources.

Higher remote disk storage performance
with NVMe ⓘ

☐

The selected size is not supported for NVMe. [See supported size families](#) ↗

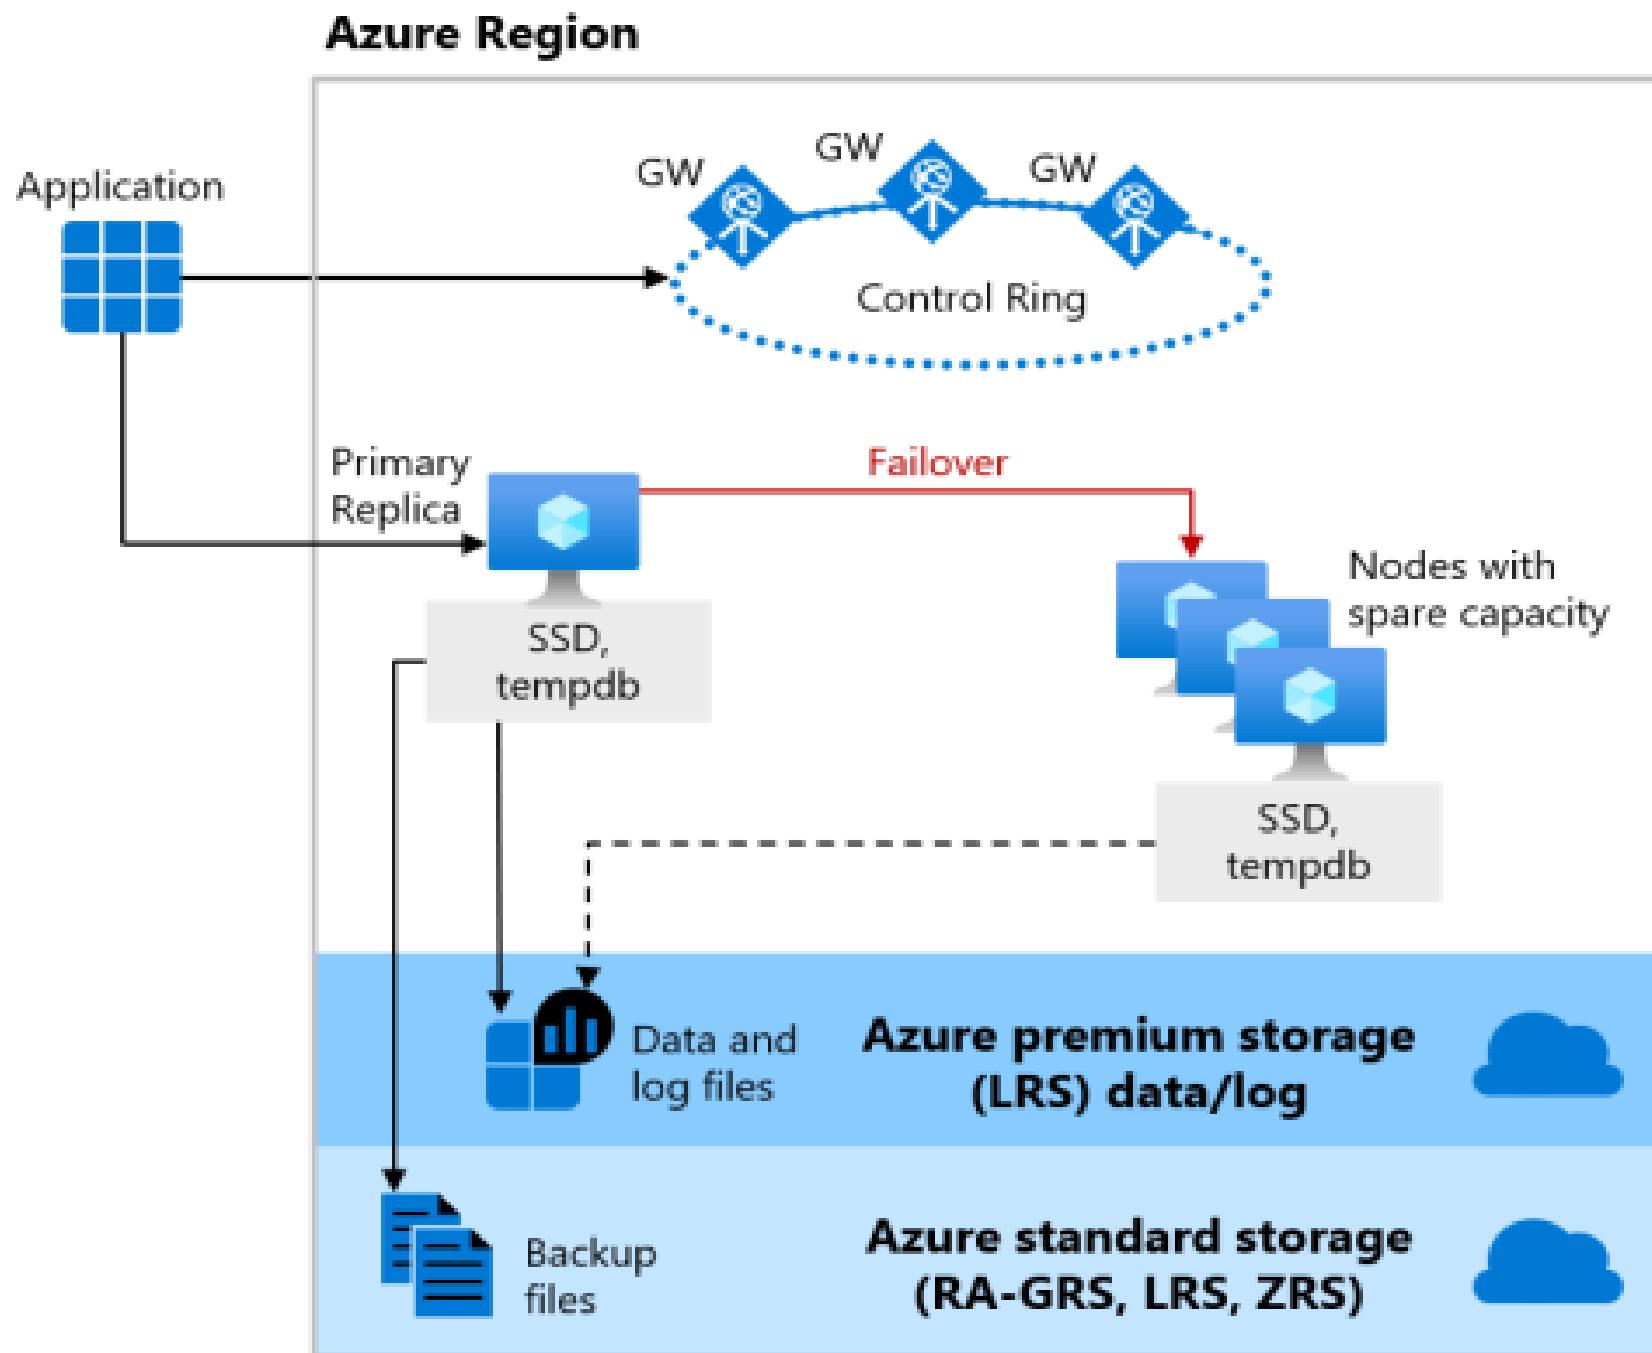

SCSI vs NVMe Drivers

Azure SQL Database

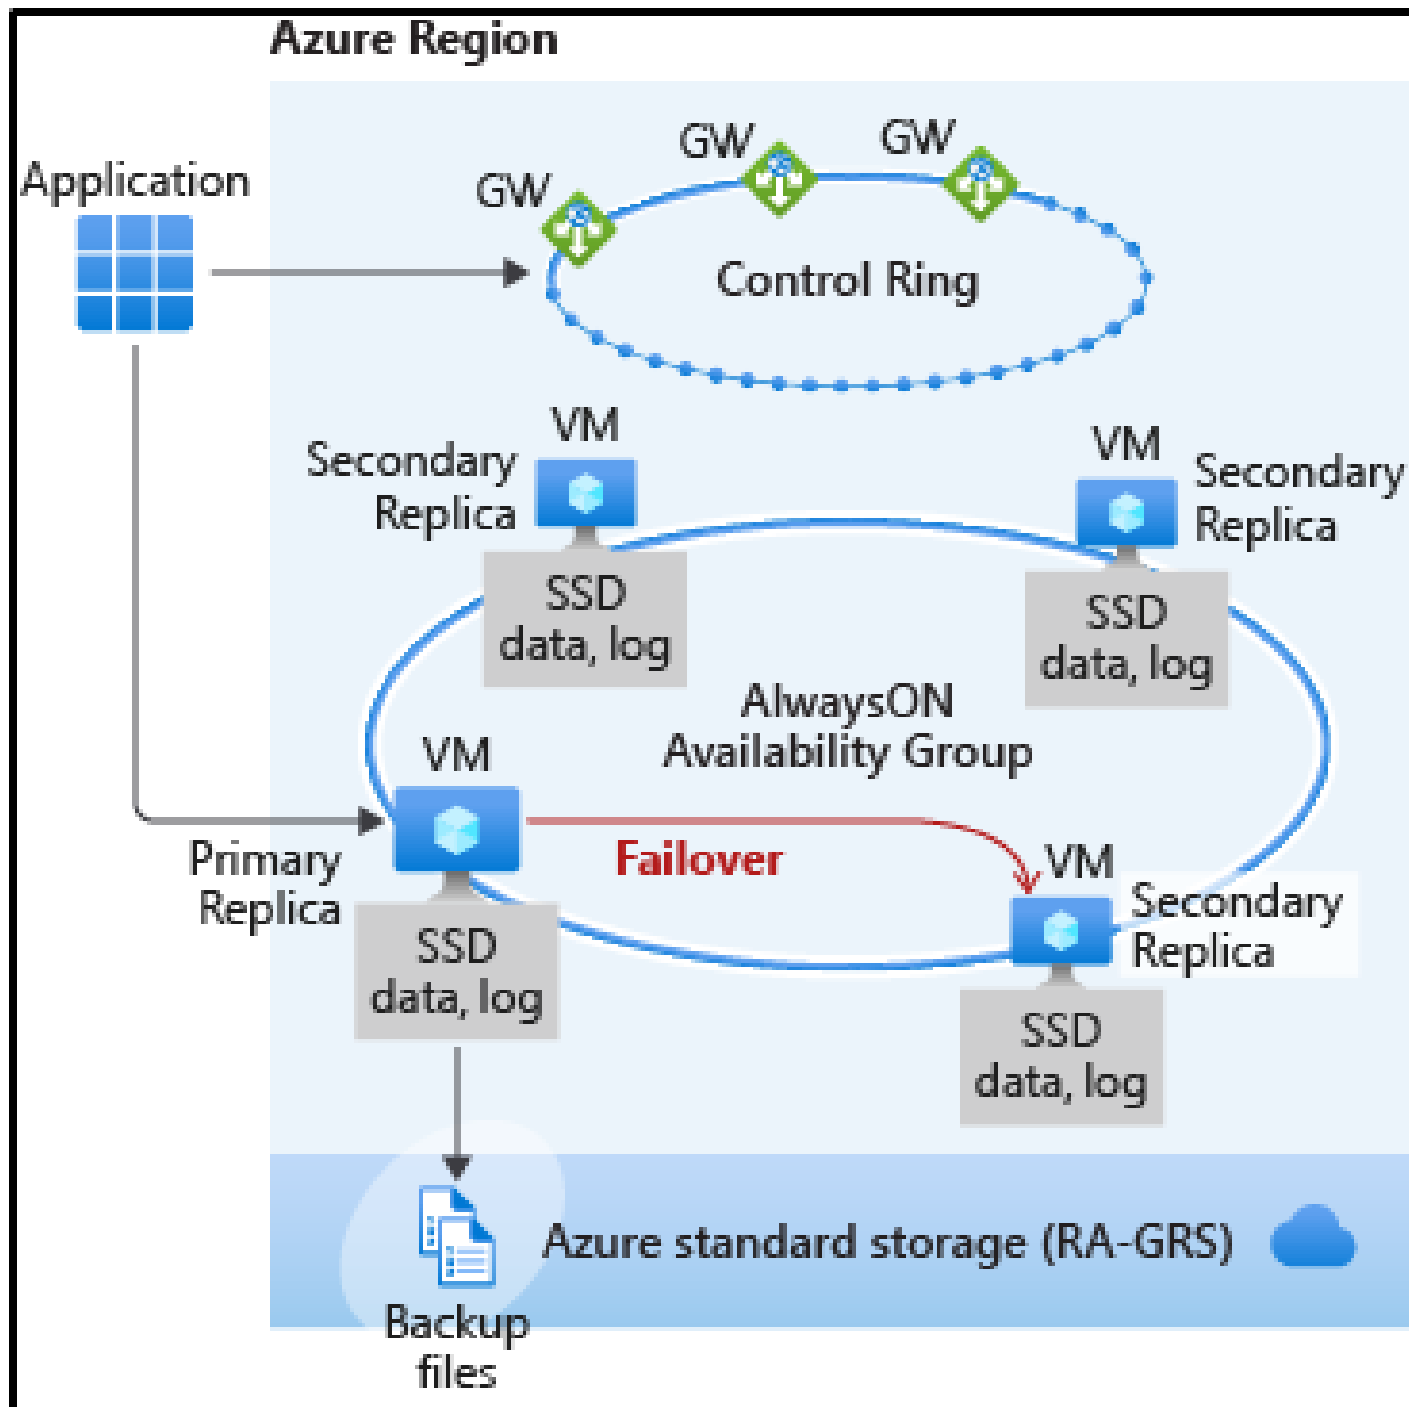

General Purpose

**Business
Critical**

Hyperscale

Region 1

Where Did the Server Go? Serverless?

Auto-pause delay

The database automatically pauses if it is inactive for the time period specified here, and automatically resumes when database activity recurs. Alternatively, auto-pausing can be disabled.

☒ Enable auto-pause

Days

Hours

Minutes

0

We Lose the Good Stuff

Azure SQL Managed Instance

Managed Instance – General Purpose

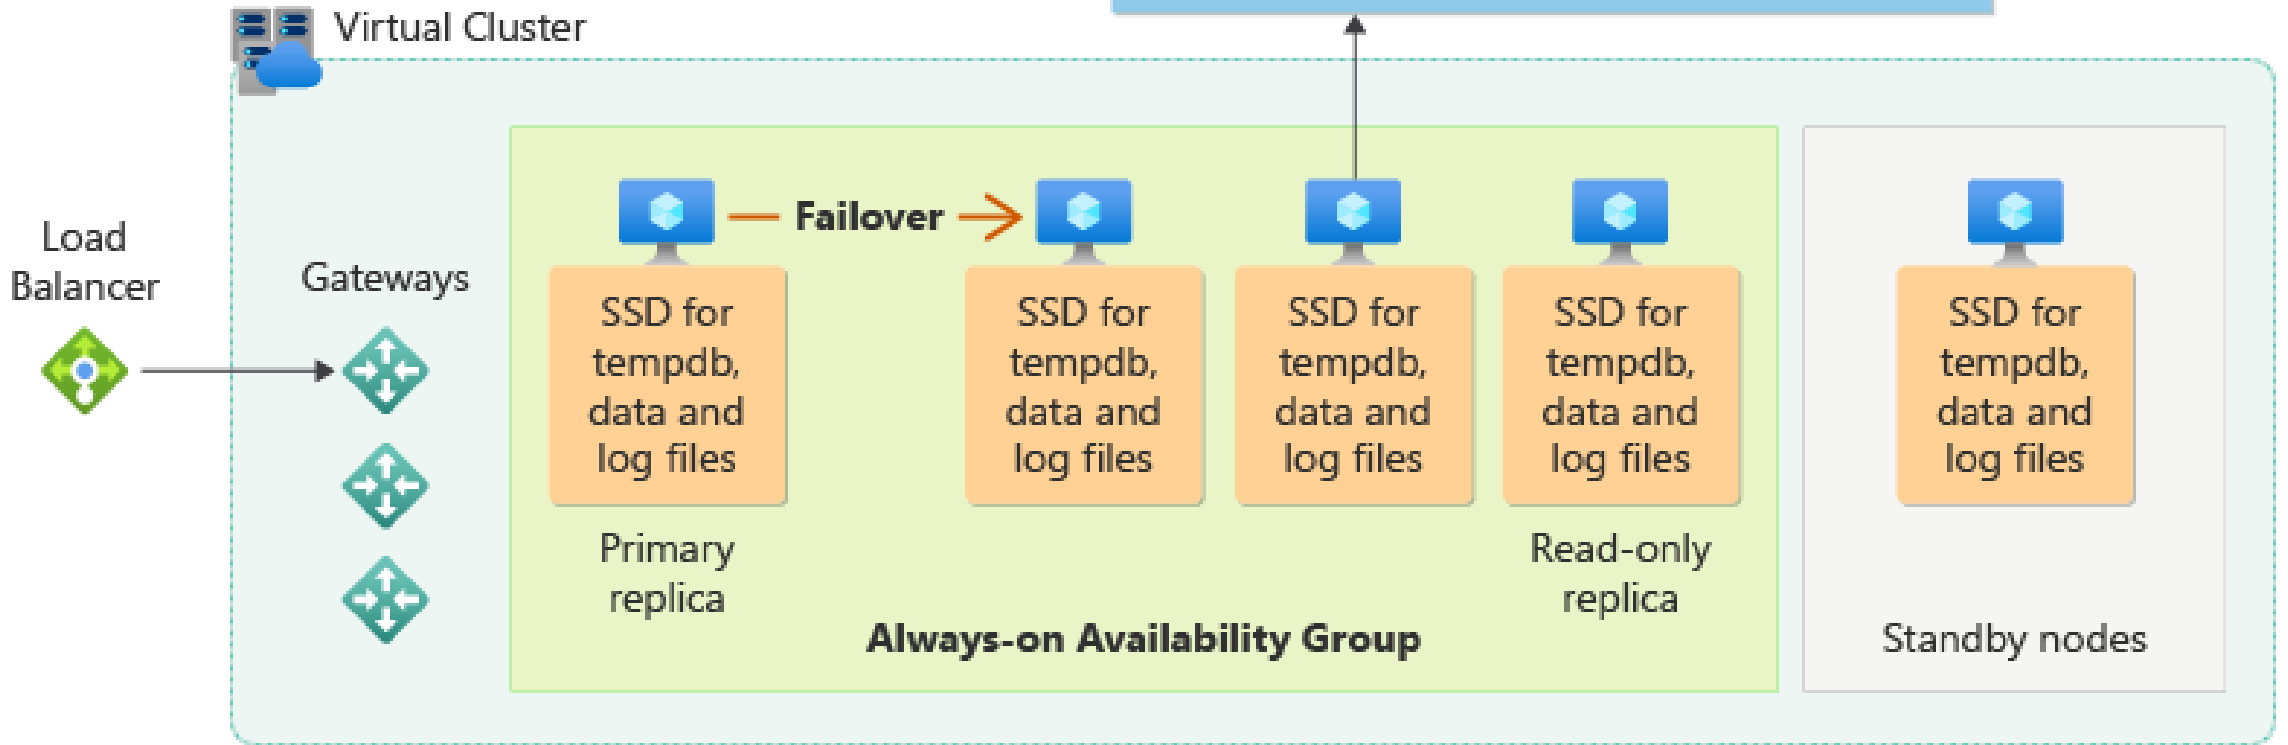

Managed Instance – Business Critical

Azure region

Datacenter

Gotcha

**The size of the
database
determines the size
of the disk.**

Performance Characteristics

| Size | Capacity | IOPS | Throughput |
|------|----------|--------|---------------|
| P1 | 4 GiB | 120 | 25 MB/second |
| P2 | 8 GiB | 120 | 25 MB/second |
| P3 | 16 GiB | 120 | 25 MB/second |
| P4 | 32 GiB | 120 | 25 MB/second |
| P6 | 64 GiB | 240 | 50 MB/second |
| P10 | 128 GiB | 500 | 100 MB/second |
| P15 | 256 GiB | 1,100 | 125 MB/second |
| P20 | 512 GiB | 2,300 | 150 MB/second |
| P30 | 1 TiB | 5,000 | 200 MB/second |
| P80 | 32 TiB | 20,000 | 900 MB/second |

NextGen Hardware MI - Preview

Updated General Purpose architecture

Utilizes Premium v2 disks vs page blobs

Increased storage latency, IOPS, and throughput

Better granular control

Workload Throttling

**Did you just
THROTTLE me!**

API Call Limits
Storage Limits
Compute Limits
Region Limits

How To Mitigate Throttling

Performance Tune

Scale Up

Ask for limit increase
from provider

Monitor and adjust
application APIs
